Your point. Made clear.

An original presenter-led system inspired by the structure of your references — not their identities.

CLARITY OVER CLUTTER.

Keep the person. Show the context. Make one memorable point.
Warm, informed and expressive — without constant effects.

VIEWPOINT / 01

The context changes the story.

ORIGINAL LAYOUT SKETCH

01 PRESENTER FIRST

Let expression and delivery carry the energy. Do not cut simply because a timer says so.

02 EVIDENCE ON DEMAND

Bring in a readable source card when it helps. Return to the person when it no longer does.

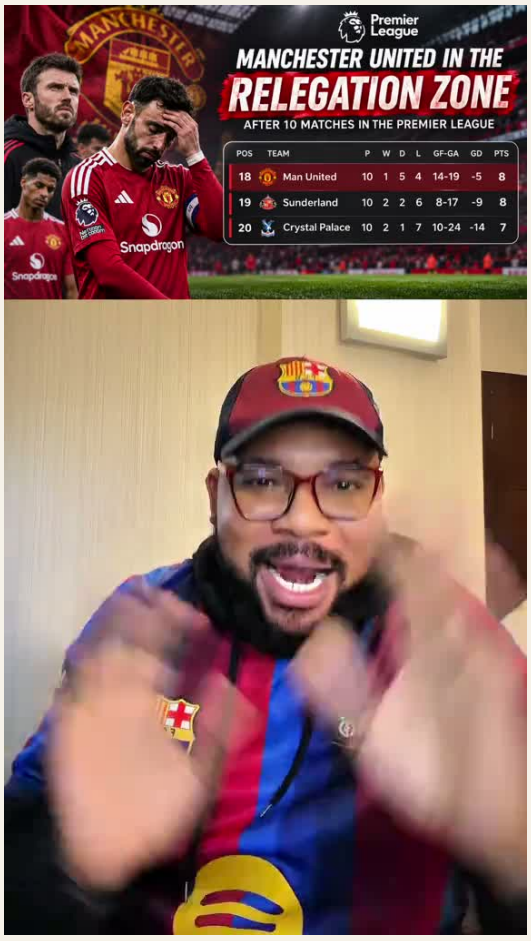

03 MEANINGFUL CAPTIONS

Phrase-based text. One highlighted thought. Consistent placement, with room for the face.

Originality rule: keep the explanatory principle; leave behind the creators' marks, team colours, studio look, catchphrases and exact layouts.

What the references show

Visual samples span all three files. These are distinct styles with a common presenter-and-context structure.

KOMBO

2:41 / 30 fps

Upper headline panel stays visible. Presenter gestures carry activity. No recurring dialogue captions seen in sampled frames.

ERIC REFERENCE

2:58 / 30 fps

Source clip becomes full-screen; presenter returns with prominent phrase captions. Occasional inset, monochrome beat and end card.

BI_BENARD

2:59 / 25 fps

Presenter above changing images. Purple-lit room is a signature. Supporting images hold for long stretches rather than rapid cuts.

Shared: vertical framing, a recognizable presenter, visible context and sustained compositions.
Not shared: one font, one palette, continuous captions or a proven music/effects formula.

Method: frames sampled every 3 seconds plus selected stills; metadata and audio loudness measured. Exact fonts, zoom curves, cut counts and music/effects are not verified. Still labels are approximate: KOMBO 0:34, Eric 1:14, bi_benard 1:30. See the companion analysis for detailed timestamps and limitations.

The visual identity

A warm editorial palette, legible captions and a small number of repeatable visual decisions.

INK	PAPER	MINT	CLAY	SLATE
#14272B	#F6F2E9	#B8E3CC	#D98B70	#A5B6B5

01 Type with a purpose

Proposed fonts: **Manrope Semibold/Bold** for captions and headings; **Source Serif 4 Italic** only for rare quotes. Sentence case by default. Exact reference fonts are unknown.

The context changes the story.

3–7 WORDS

MAXIMUM 2 LINES

ONE HIGHLIGHT

02 1080 × 1920 type scale

Hook: **76–88 px**. Dialogue: **58–66 px**. Context label: **30–36 px**. Start caption holds at 0.8–2.2 seconds; extend for reading and synchronize to the actual speech.

03 Contrast and restraint

Paper text on ink; mint for one key phrase. Clay is a small counterpoint accent, not body text. Keep skin tones natural. Avoid pale accent text on paper backgrounds.

PDF samples use portable Helvetica/Times equivalents, not installed production fonts. Final font rendering and brand name remain subject to approval.

Edit for the argument

A repeatable system — not a preset that forces every video into the same rhythm.

01 ## Viewpoint → receipt → takeaway

Start presenter-led. Add a temporary evidence card only when needed. Use a full-screen crop plus small presenter inset for dense material. Return to the face for the conclusion.

02 ## Cut on meaning

Start with 4–8 second presenter holds. Consider a visual reset every 6–12 seconds only when justified. Keep evidence up long enough to read; simple cards may need 3–6 seconds.

03 ## Use zooms sparingly

Punch in from 100% to 106–110% for an important beat. Start with no more than 2–3 per 30 seconds. Do not confuse a speaker leaning forward with a digital zoom.

04 ## Motion should explain

Prefer direct cuts. Evidence entry: 180–240 ms, 16–24 px movement plus fade. Exit: 120–180 ms fade. Round to whole frames. No default spins, whip transitions or constant bouncing text.

05 ## Protect the phone view

At 1080 × 1920, keep critical content initially inside x=90–900, y=180–1570. Test in the actual platform UI. Move captions away from mouths, hands, evidence and interface overlays.

30-second test: 0–3 hook · 3–8 context · 8–17 viewpoint · 17–24 counterpoint · 24–28 takeaway · 28–30 response prompt.
This is a new short-format template, not the timing of the 3-minute references.

Sound, delivery & approval

Voice first. Deliberate graphics. A consistent finish — with honest limits on what has been verified.

MEASURED REFERENCE AUDIO

KOMBO	Eric reference	bi_benard
–14.4 LUFS –0.5 dBTP	**–14.8 LUFS** +1.2 dBTP	**–18.8 LUFS** –3.8 dBTP

Whole-file FFmpeg loudness measurements. Positive reconstructed peak in the Eric file suggests limited headroom; it does not prove audible distortion. Music, BPM and individual effects were not identified.

01 Our sound proposal

Voice remains dominant. Music is optional: licensed, low-density, no competing vocals. Start the bed 18–24 dB below speech; duck further if needed. Use at most a subtle tick for a meaningful reveal, not every caption.

02 House delivery target

Aim for –**16 to** –**14 LUFS integrated** and ≤ –**1 dBTP**; verify after AAC encoding. This is a house target, not a platform mandate. Master at 1080 × 1920 from original footage; choose frame rate to suit the source. Do not treat 576p references as masters.

03 Approve these four choices

1. Ink / Paper / Mint palette.
2. Readable captions throughout spoken sections.
3. Temporary evidence cards rather than permanent split-screen.
4. Minimal optional music, not a heavy soundtrack.

Next: apply the approved direction to 15–30 seconds of your own footage. Complete a listening pass, check caption timing and UI safe areas, confirm source permissions, and review on a phone before export.
